Kahvely Latest Update Report

Open Testing release readiness | Version 1.0.17+1014

Public release message

New in this update: a more reliable login and sign-up flow, improved follow requests, smoother navigation between Home, Collection, Map and Profile, better maps with current location and directions, saved places with Want to Go, comment editing and deleting, full-screen photo browsing, clearer loading/retry messages, and many security, stability and language improvements.

1 Account reliability

Login, sign-up, and Google sign-in now behave more consistently. Account setup has clearer recovery steps, and profile settings are safer and easier to validate.

2 Follow flow repairs

Follow requests, accepting, cancelling, removing, and unfollowing have been improved. Users now get clearer confirmations, loading states, and error feedback.

3 Navigation and maps

Users can swipe between Home, Collection, Map, and Profile. Maps now start in a more useful place, show current location when available, and include clearer location prompts.

4 Place details and directions

Place pages now have a cleaner preview, clearer location information, post counts, a post grid, and a direct option to open directions in a map app.

5 Saved places

The new Want to Go feature lets users save places privately, find them in Collection, search and sort them, and see saved-place markers on the map.

6 Comments, media, and recovery

Users can edit or delete their own comments and replies. Full-screen post photos can be swiped, zoomed, and panned. Home and saved places recover better from connection issues.

Current status and next checks

The next signed Play bundle has been built as version 1.0.17+1014. The main focus before wider release is a final end-to-end check on a real Android release build. Priority checks include login and sign-up, follow requests, saved places, map/location behavior, comments, full-screen media, and recovery on poor or lost internet connections.
